

Substratum: **Thermoplastic**

DESCRIPTION

Thermoplastic is a synthetic material that can be melted and reshaped.

USES

Thermoplastic is used in a wide range of applications, including automotive parts, packaging, and consumer goods.

ADVANTAGES

It is:

- Durable
- Resistant to chemicals

DISADVANTAGES

Thermoplastic is susceptible to heat and can become soft and deformed when exposed to high temperatures.

CONCLUSION

Thermoplastic is a versatile material with many uses. It is a good choice for applications where durability and resistance to chemicals are important.

It is:

- Durable
- Resistant to chemicals
- Resistant to heat
- Resistant to UV radiation
